

B²

9. (Twice Amended) A method to control the growth of microorganisms comprising contacting the microorganisms with a microbicidal composition comprising a complex of the formula R-M, wherein R is at least one organic chelating moiety and M is at least one metal ion, and where R is present in an at least equimolar amount based on the amount of M, and M is microbicidal to at least one microorganism, wherein said at least one organic chelating moiety is an amino acid, wherein said amino acid includes a double bonded oxygen, wherein said double bonded oxygen of said amino acid is complexed to M at a pH of about 2 or less, and wherein said composition kills said microorganisms intracellularly.

B³

16. (Twice Amended) A microbicidal composition comprising at least one disinfectant and a product obtained by combining at least one metal ion (M) with at least an equimolar amount of at least one organic chelating moiety (R) based on the amount of M, wherein M is microbicidal to at least one microorganism, wherein said at least organic chelating moiety is an amino acid, wherein said amino acid includes a double bonded oxygen, and wherein said double bonded oxygen of said amino acid is complexed to M at a pH of about 2 or less.

B⁴

21. (Twice Amended) A microbicidal composition comprising a disinfectant and a complex of the formula R-M, wherein R is at least one organic chelating moiety and M is at least one metal ion, and where R is present in an at least equimolar amount based on the amount of M, and M is microbicidal to at least one microorganism, wherein said at least one organic chelating moiety is formed from an amino acid, said organic chelating moiety has a carboxylic group which forms a dative covalent bond with M, and wherein said carboxylic group includes a double bonded oxygen which is complexed to M at a pH of about 2 or less.

B⁵

23. (Twice Amended) A method for preserving cut flowers or plants from

Amendment

U.S. Patent Application No. 09/761,561

pathological microorganisms comprising:

treating said flowers and plants with the microbicidal composition comprising a complex of the formula R-M, wherein R is at least one organic chelating moiety and M is at least one metal ion, and where R is present in an at least equimolar amount based on the amount of M, and M is microbicidal to at least one microorganism, wherein said at least one organic chelating moiety is an amino acid, wherein said amino acid includes a double bonded oxygen, and wherein said double bonded oxygen of said amino acid is complexed to M at a pH of about 2 or less.

26. (Twice Amended) A method for protecting living flowers or plants comprising treating said flowers and plants with the microbicidal composition comprising a complex of the formula R-M, wherein R is at least one organic chelating moiety and M is at least one metal ion, and where R is present in an at least equimolar amount based on the amount of M, and M is microbicidal to at least one microorganism, wherein said at least one organic chelating moiety is an amino acid, wherein said amino acid includes a double bonded oxygen, and wherein said double bonded oxygen of said amino acid is complexed to M at a pH of about 2 or less.

28. (Twice Amended) A microbicidal composition comprising an organo-metallic chelate of silver cations and glutamic acid, wherein the chelate exhibits the structural spectra depicted in Figures 1, 2, or 3, or combinations thereof below:
